

Keeping all RBX Group Stakeholders Informed

Note from the Managing Director

The festive season has flown by and our two companies continue to actively support our producers during this critical part of the growing season.

The 2nd SPLAT application is in full swing around the country with the first season of mechanical application showing fantastic results to date. The SIT programme has also not missed a beat as it continues to deliver moths to help suppress the FCM population. With a difficult Citrus Black Spot season last year our RB1 / Blackout / Dikphos product is of significant assistance in the late CBS sprays around this time of the year.

The pressure on our industry to control the phytosanitary pests is ever-present and it is awesome that we offer sustainable options to help manage these issues while not impacting the safety of the final consumer.

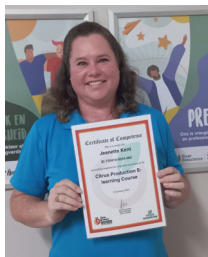

Cheers - Rob

Citrus Course Graduates Celebrate

A number of RBX group employees completed the Citrus Academy course titled 'Citrus Production'. All were delighted to have done the course and have the opportunity to understand more of what goes into the production of citrus.

The course offers great insight into the history of the citrus industry in South Africa, providing key facts and principles of citrus production. It is highly beneficial for our staff to complete the course to allow them to better understand the industry and thereby be able to better serve it with this deeper knowledge.

The RBX group is excited to see how eager our employees are to learn and grow together with the company as we strive to support the sustainability of our industry and other agricultural crops into the future.

"Education is not the learning of facts, but the training of the mind to think."

- Albert Einstein

Key Roles Appointed

Dr Megan Malcahy joined our RBX team as Technical Manager. She has a PhD in Entomology and has recently returned to South

Africa after being in the US since 2017. Megan has significant experience in both research and extension activities relating to IPM and will bring significant value to RBX in her cross-functional role within the Business Development Team.

Nevill Boersma joined the XSIT team as a Programme Development Officer in Citrusdal. Nevill previously worked for XSIT before going to

New Zealand for two years. He played a key role in developing and implementing the SIT Programme and the return of his scarce expertise and experience will bolster the efforts to secure the ideal place for SIT in the future of sustainable crop protection in the area.
