

Growing Footprint, Growing Responsibility

As River Bioscience's reach expands, so does our responsibility to growers and one another. In May, the Northern and Southern Customer Service Units came together to reflect on the past season – a valuable time spent celebrating achievements, sharing insights, and looking ahead.

One message came through clearly: while this team may be on the frontlines of customer interaction, their success would not be possible without the critical support from all departments across the business. Every achievement is shared - a result of collaboration, communication, and collective effort.

The distinction between “off-season” and “in-season” is fading. As our product basket grows, so does our ability to bring value beyond traditional crop markets. We're proud and humbled to now support an increasing number of growers across diverse crop types, with world-class solutions tailored to their needs.

RB Takes on Europe: Research, Partnerships & Innovation

Sean, Megan, and Emma recently travelled to Europe to attend a series of important meetings across France and Spain. Their trip included site visits with key partners and researchers, notably a tour of the Bioline production facility in Valence, France – a valuable opportunity to strengthen relationships and align on future developments.

One of the highlights of their journey was attending the 8th International Entomophagous Insects Conference in Tours, France. This event focused on beneficial insects that control crop pests through predation and parasitism – a key area of interest in RB's commitment to sustainable agriculture.

RB was proud to showcase our research at the conference through two poster presentations from the Product Development & Innovation Department:

- Our microbial quality control system
- The non-target chemical effects on *Trichogrammatoidea cryptophlebiae*, our mass-produced tortricid parasitoid

Well done to the team for representing RB on the international stage and bringing home new insights to power our innovation forward!

Here's to building on this momentum – **together.**

Ecocert Certification Milestone Achieved!

We're pleased to share that, following our successful ISO 9001 certification earlier this year, our virus products have now also received **ECOCERT certification!**

These two significant milestones are a reflection of our ongoing commitment to quality, compliance, and innovation – ensuring we continue to meet both regulatory standards and grower expectations.

A big thank you to everyone who played a role in achieving this. Your hard work and dedication make these achievements possible.
